

# EB23(32)X-10D(I)-S

#### 10Gb/s SFP+ BIDI SC 10km DDM Transceiver

#### **PRODUCT FEATURES**

- Support data rate up to 11.3Gb/s
- Hot-Pluggable SFP Footprint and Single SC Connector
- Up to 10km reach for G.652 SMF
- > 1270nm DFB Transmitter and 1330 PIN receiver for EB23X-10D(I)-S
- > 1330nm DFB Transmitter and 1270 PIN receiver for EB32X-10D(I)-S
- > Temperature Range:

Commercial:0°C ~70°C

Industrial: -40°C ~85°C

- Power consumption <1W</p>
- Compliant with SFP-8431
- Compliant with SFP-8432
- Compliant with SFP-8472
- Compliant with IEEE802.3ae
- > RoHS 6 compliance
- Complies with EU Directive 2015/863/EU

#### **APPLICATIONS**

- > 10GBASE-LR at 10.3125Gbps
- > 10GBASE-LW at 9.953Gbps
- Other Optical Links

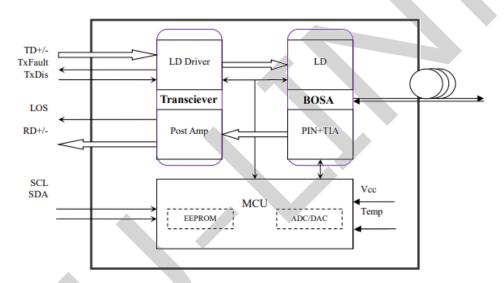

#### **DESCRIPTIONS**

The EB23(32)X-10D(I)-S series single mode transceiver is small form factor pluggable module for duplex optical data communications such as 10GBASE-LR/LW defined by IEEE 802.3ae. It is with the SFP+ 20-pin connector to allow hot plug capability.

The EB23(32)X-10D(I)-S module is designed for single mode fiber and operates at a nominal wavelength of 1270nm or 1330nm; the transmitter section uses a multiple quantum well DFB, which is class 1 laser compliant according to International Safety Standard IEC-60825.

The receiver section uses an integrated InGaAs detector preamplifier (IDP) monted in an optical header and a limiting post-amplifier IC.

## **Module Block Diagram**

#### Notes:

- 1. The optical power is launched into SMF.
- 2. The receiver shall be able to tolerate, without damage, continuous exposure to an optical input signal having this average power level. The receiver does not have to operate correctly at this input power.

# **Digital Diagnostics**

| 20  | V <sub>EET</sub> | Transmitter Ground (Common with Receiver Ground)               | 1    |

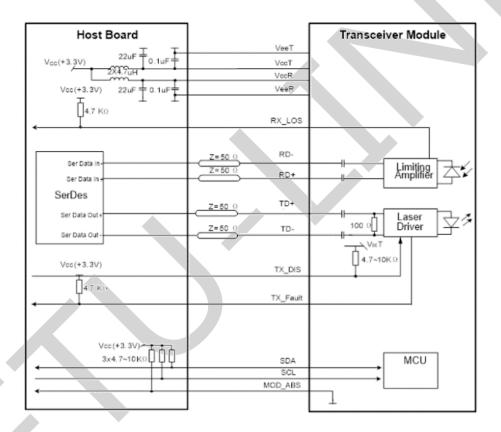

#### Notes:

1) Circuit ground is internally isolated from chassis ground.

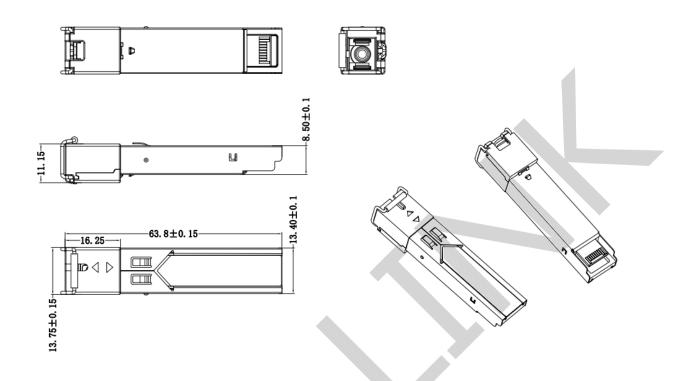

- 2) T<sub>FAULT</sub> is an open collector/drain output, which should be pulled up with a 4.7k 10k Ohms resistor on the host board if intended for use. Pull up voltage should be between 2.0V to Vcc + 0.3V.A high output indicates a transmitter fault caused by either the TX bias current or the TX output power exceeding the preset alarm thresholds.A low output indicates normal operation. In the low state, the output is pulled to <0.8V.
- 3) Laser output disabled on  $T_{DIS}$  >2.0V or open, enabled on  $T_{DIS}$  <0.8V.
- 4) Should be pulled up with  $4.7k\Omega$   $10k\Omega$  host board to a voltage between 2.0V and 3.6V. MOD\_ABS pulls line low to indicate module is plugged in.
- 5) Internally pulled down per SFF-8431 Rev 4.1.
- 6) LOS is open collector output. It should be pulled up with  $4.7k\Omega 10k\Omega$  on host board to a voltage between 2.0V and 3.6V. Logic 0 indicates normal operation; logic 1 indicates loss of signal.
