#### Applications

- Extend your Ethernet connection up to 0~120km away using fiber optics
- Creates an economical Ethernet-fiber/copper-fiber link for connecting remote sub-networks to larger fiber optic networks/backbones
- Converts Ethernet to fiber, fiber to copper/Ethernet, ensuring optimum network scalability for connecting two or more Ethernet network nodes (e.g. connecting two buildings on the same campus)
- Designed to provide high-speed bandwidth for demanding large scale work groups that require expansion of Gigabit Ethernet Network

#### Description

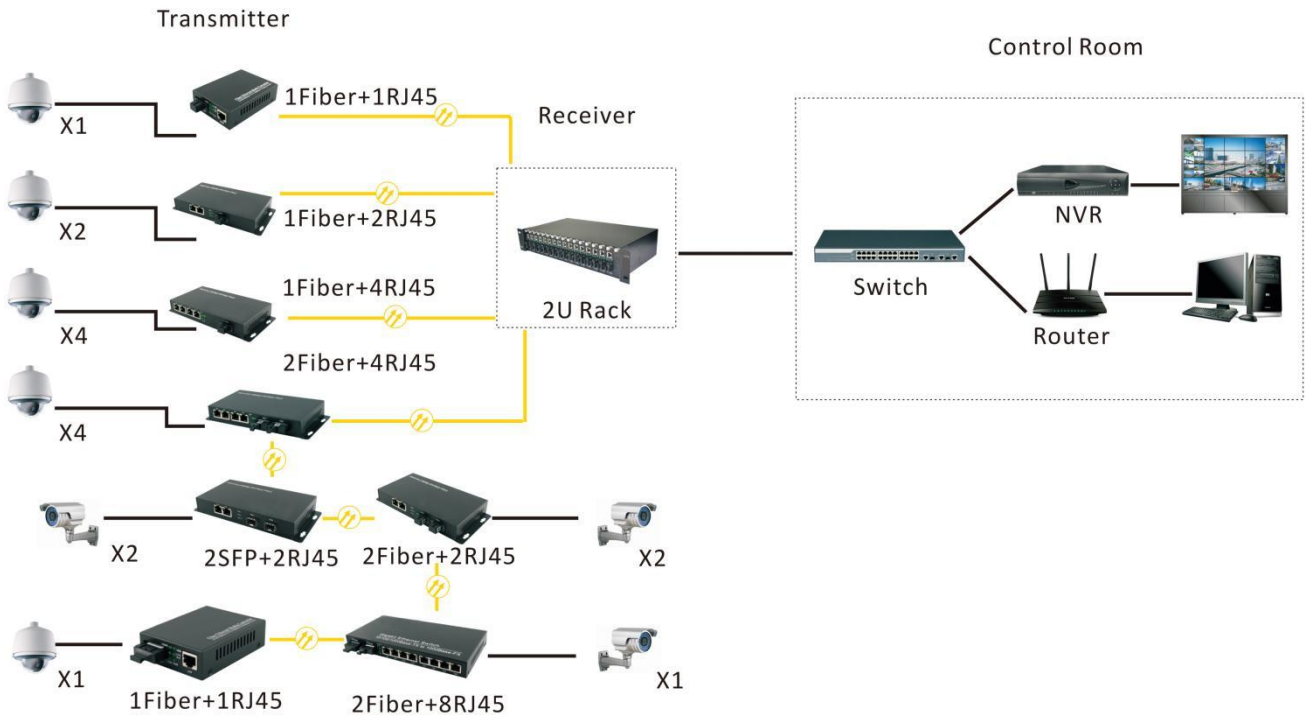

The fiber switches are unmanageable,when convert transmission,all ports share the same data. They can extend the network transmission from 100m to 120km and can realize the interconnection between motherboard server, Repeaters, hubs, switches, terminal.Plug and play design makes easy installation, no on-site adjustment. Operation status can be monitored through a set of Diagnostic LED.
